Subject: Diamond Alkali Superfund Site- GW Sampling MEDDs

Good Morning Cathy,

We are starting to compile the Region II MEDDs from the most recent GW Sampling event at DASS. When receiving the MEDDs back from the laboratory, I noticed that we are getting error messages related to the Lab_anl_method_name field. It does not appear that the analytical methods we are using for this project are listed in the Region II Reference value table, and therefore we are getting "reference value not found" errors. For this project we are performing the following methods:

- Metals CLP ISM02.3 (ICP-AES)
- VOCs CLP SOM02.3

Is there a reference value that EPA would like us to use, or is it possible to have EPA add these methods to their valid value list.

Thanks in advance,

Thanks

Brian Mikucki
